THE NURSERY INDUSTRY IN PENNSYLVANIA

There are approximately 390 licensed nurseries in Pennsylvania whose 4700 acres of growing nursery stock are annually inspected by the nursery inspection service of the State Department of Agriculture. These State inspections are made to discover insects and diseases which may be present. Infested or infected stock is cleaned-up or eliminated from the nurseries under the supervision of the State inspector. Every effort is made to insure the cleanliness and freedom from diseases and insects of stock before licenses are issued to the nurseries.

The climate of Pennsylvania is such that both southern grown and northern grown species do extremely well in the State. This makes it possible for Pennsylvania nurserymen to acclimate northern and southern grown species for the needs of buyers within the State. Therefore persons wishing northern or southern plant species need not go outside the State for such stock. Securing this stock from Pennsylvania nurseries is the best guarantee of the adaptability of these varieties to Pennsylvania conditions.
